SUMMARY

Backend Software Engineer with 2+ years of experience building and maintaining production grade Ruby on Rails APIs across healthcare, logistics, payments, and regulatory systems. Proven ability to design service oriented architectures, integrate third party systems (payments, logistics, SMS, cloud storage), optimize queries, and deliver reliable backend solutions used by real organizations. Strong background in API development, domain modeling, and system maintenance.

Experienced in leveraging AI assisted development tools to improve productivity, accelerate debugging, and enhance code quality. Strong background in API development, domain modeling, and system maintenance.

SKILLS

- **Languages:** Ruby, JavaScript, C
- **Backend:** RESTful APIs, Service Objects, Sidekiq, Devise, JWT, OAuth
- **Databases:** PostgreSQL, MySQL
- **Testing:** Rspec
- **Infrastructure & DevOps:** AWS, Google Cloud, Fly.io, Docker, Nginx, Passenger
- **Integrations:** Payment Gateways, Logistics APIs, Google Places, SMS, Email
- **Version Control:** Git, GitHub
- **OS:** Linux (Server Administration), Windows, MacOS
- **AI & Developer Tools:** ChatGPT, GitHub Copilot, AI-assisted debugging & code generation

PROJECTS

Healthcare Supply & Procurement Platform (Medex)

GitHub: Private

- Tech Stack: Ruby on Rails, PostgreSQL, Sidekiq, REST APIs
- Built and maintained backend APIs powering a medical supply marketplace connecting manufacturers, distributors, and retailers
- Designed and implemented cluster-based company segmentation, improving onboarding workflows and reporting capabilities
- Developed delivery analytics endpoints (pending, shipped, delivered, warehouse sorting) used in operational dashboards
- Optimized complex database queries and refactored filtering logic, improving performance and maintainability across large datasets
- Resolved SQL aggregation and grouping issues, ensuring accurate reporting for orders and deliveries
- Strengthened external logistics integrations with validation, error handling, and failure messaging

Logistics & Delivery Management Platform

GitHub: Private

- Tech stack: Ruby on Rails, Payments, Google Places API, AWS S3
- Built backend systems for delivery requests, provider matching, execution, invoicing, and payments
- Designed structured pickup and drop-off address models, improving validation and API consistency
- Implemented logic to prevent duplicate delivery fulfillment by automatically closing unpaid competing requests
- Improved payment webhook handling by centralizing logic and ensuring reliable state transitions
- Developed and maintained wallet and wallet transaction systems for delivery companies
- Integrated Google Places API for address autocomplete and AWS S3 for proof-of-delivery storage
- Maintained delivery status history and audit logs for operational traceability

Pharmaceutical Licensing & Regulatory System (PCN Window)

GitHub: Private

- Tech stack: Ruby on Rails API, PostgreSQL, Sidekiq, Payment Integration
- Built and maintained backend APIs for a regulatory licensing system used by pharmaceutical companies and government bodies
- Implemented license lifecycle workflows (new, renewal, revalidation, approval, cancellation)
- Designed and developed inspection workflows, including assignment, reporting, and facility approvals
- Integrated payment and invoicing systems, handling callbacks and ensuring correct invoice state transitions
- Built role-based dashboards and analytics for regulators, including revenue insights and licensing trends
- Refactored large queries to improve performance and pagination on high-volume datasets
- Improved system reliability by enhancing error handling and debugging for payment failures

PROFESSIONAL EXPERIENCE

Backend Software Engineer

Outsource Global, Remote

September 2024 - Present

- Developed and maintained production-grade Ruby on Rails APIs across healthcare, logistics, and regulatory platforms

- Designed scalable service-oriented architectures, improving system modularity and maintainability
- Built and optimized complex database queries, improving performance for high-volume transactional systems
- Integrated third-party services including payment gateways, logistics APIs, Google Places, SMS, and cloud storage (AWS S3)
- Implemented background job processing (Sidekiq) for asynchronous workflows such as notifications, payments, and reporting
- Improved system reliability by enhancing error handling, logging, and failure recovery mechanisms
- Collaborated with cross-functional teams to deliver features used by real businesses and regulatory bodies

IT Support Technician

Outsource Global

January 2020 – September 2024

- Provided technical support for hardware, software, and network issues across the organization
- Managed user accounts, permissions, and system access
- Assisted in deployment and maintenance of IT infrastructure and internal systems
- Developed strong troubleshooting, documentation, and cross-team collaboration skills

EDUCATION

Qwasar Silicon Valley

Software Engineering Certificate

August - 2022 to October - 2023

- Certificate in Advanced Backend Development
